

# Engineering

## **Technology:**

Circle is continually learning and implementing new technology to serve our customers better.

## **Controllers:**

Let automation lead the way with Circle designing, installing and servicing your programmable controllers.

## **Products:**

Circle's engineers are up to speed on the new products to hit the marketplace. Thus, we are able to hit the ground running and design a system or complex that will best accomplish your objectives.

## **Power Distribution:**

Our experience ranges from primary distribution analysis/engineering/construction through secondary device utilization.

## **Education:**

Using school and on the job training, Circle has brought a new level of expertise to the electrical field.

## **Computers:**

Using software and the internet, we can transmit, receive, and process information quickly, thus cutting down on the overall costs to a project.

Circle Electric engineers have kept pace through continuing education, training and performance evaluations on a systematic basis. This assures that the people designing your systems are up to speed on every new product and process to hit the marketplace. Thus, they're able to hit the ground running...to weigh every available option and make the choices that best accomplish your objectives.

Innovations in programmable controllers, power substations, energy management, lighting, communications and security systems require a new breed of professionals conversant in sophisticated, leading edge technologies.

At Circle, state-of-the art technical skill and a "can do" attitude combine to successfully tackle even the toughest challenge you can bring us.
