

Power Distribution

We believe working on your distribution system is like surgery. It's the heartbeat of your facility and should be a painless process.

Power Factor, Harmonics, Voltage Sags - These are terms that define the health of your facility's electrical system. If your system is not functioning at peak performance, this will result in additional costs for operation, or in equipment not performing as

Circle Electric

required. By conducting a metering analysis, a facility's health can be defined, corrective actions determined, along with costs and payback periods.

Our experience ranges from primary distribution analysis/engineering/construction through secondary device utilization.

Call us for your next check-up and we'll improve your situation.
